Graphic of the solar space transmission concept. US Department of Energy.

The biggest issue would be safety, with potential hazards to animals, humans and plants that might be in the path of the transmissions. However, the goal of a "never-ending" supply of solar energy makes the project an important one. Other concerns include the potential to "militarize" solar transmission as a weapon.

*array on the International Space Station. On the new solar
the solar array would be considerably larger, at two square kilometres.*

plan envisioned from China,
